## **ABSTRACT**

The proposed hand sign detector presents a novel methodology for identifying sign language by converting hand gestures into digital text. The utilization of sign language holds significant importance in facilitating communication for persons who experience hearing impairment. Nevertheless, the identification and comprehension of sign language remains a multifaceted endeavor. The objective of this study is to present a methodology that integrates hand gesture recognition in sign language with automated translation into textual representation.

The proposed approach involves several key steps, including the extraction of visual features from hand gestures by capturing a unique hand gesture, followed by an automatic translator using a trained natural language model for sign language. After that implement an application that is able to recognize and understand the unique variations of hand gestures in sign language.

## DEDICATION

*This final project is dedicated to the author, as well as their parents who have consistently provided support, and the professors and staff who have offered valuable direction and assistance throughout the process. Additionally, I would want to express my gratitude to my fellow colleagues who consistently provide assistance in various situations. For the individuals pursuing a thesis, it is hoped that they will be afforded ease and proficiency.*

## **ACKNOWLEDGEMENT**

I'd want to convey my heartfelt gratitude to everyone who has always been supportive of me as I worked on this final project:

1. I congratulate myself for working tirelessly on and completing this final project.
2. To my parents, who have always backed me up and prayed for me.
3. Mr. Rusdianto Roestam, thank you so much for agreeing to be my final project advisor.
4. All of my lecturers have provided me with information over the last few years, and I am really glad to have been a student of all of them.
5. For my friends and friends who always pray for me and support me in any situation, I express my gratitude.
