Average Perplexity Score: 290.364

A document's perplexity is a measurement of the randomness of the text

Burstiness Score: 591.733

A document's burstiness is a measurement of the variation in perplexity

Your sentence with the highest perplexity, "In making parts for supply activities to PT.", has a perplexity of: 3431

ABSTRACT

PT. PMD is a manufacturing company that produces automotive components for motorcycles and cars. The manufacture of components for motorcycle and car products, PT. PMD requires parts for the manufacture of components that they will produce. To get parts that will be used to manufacture motorcycle and car components, there are vendors who work to supply the parts that are needed by PT. PMD. In making parts for supply activities to PT. PMD, vendors need materials that will be used to make parts. To provide for the necessary material requirements in making part requests from PT. PMD, the vendor will request material from PT. PMD and PT. PMD will send the material needed by the vendor to make parts. In managing material requests and ensuring the inventory of materials requested by vendors is ready to be sent, PT.PDM often encounters problems for receiving material ordering information. Miscommunication often occurs due to the current process flow, when vendors order materials in the form of memo messages to the procurement team at PT. PMD and human error problems from the procurement team that miss messages from vendors which cause material requests to be poorly conveyed to the PPIC department as the person in charge of production planning and material stock at PT PMD. This is a problem that makes it difficult for PPIC and vendors. With this management system, it is expected to help facilitate communication for request orders in connecting vendors directly with the PPIC department in ordering materials so that the process can run smoothly.
