ABSTRACT

Managing a wardrobe is so time-consuming in today's fast-paced world. Many people still struggle with deciding what to wear for different occasions or events because it takes so much time, leading to feelings of being overwhelmed by their wardrobe. This often results in inefficient and repetitive outfit choices. To address this issue, we have developed a technology designed to streamline and enhance the process of selecting daily outfits through a web-based application.

By utilizing AI technology and featuring a user-friendly interface, this web-based application allows users to easily upload images of their clothing, categorize them, and create a virtual wardrobe. The key innovation of this application is its ability to automatically generate mix-and-match outfits using the user's existing wardrobe items, preferences based on a questionnaire, and the specific occasion. This application efficiently and effortlessly manages users' wardrobes, proving to be highly useful for real users by elevating their outfit combinations with minimal time.

Keywords: *outfit, wardrobe, fashion, digital*

TABLE OF CONTENTS

STATEMENT OF ORIGINALITY	3
SCIENTIFIC PUBLICATION APPROVAL FOR ACADEMIC INTEREST	4
ADVISOR APPROVAL FOR JOURNAL/INSTITUTION'S REPOSITORY	5
