4. ZeroGPT for F400

The screenshot shows the ZeroGPT website interface. At the top, there's a navigation bar with 'Products', 'Pricing', and 'API' links. The main heading reads 'Trusted GPT-4, ChatGPT and AI Detector tool by ZeroGPT' followed by 'ZeroGPT the most Advanced and Reliable Chat GPT, GPT4 & AI Content Detector'. Below this, a 'TABLE OF CONTENT' is displayed, listing sections like 'STATEMENT OF ORIGINALITY', 'SCREENSHOT OF ZEROGPT', 'PART 4', 'A. DESIGN IMPLEMENTATION', and various 'DPD Level 3' items for staff, delete staff, add patient, delete patient, and delete patient. A 'Detect Text' button and an 'Upload File' link are present. To the right, it shows '14,907/15,000 Characters' and 'Check 125,000 characters. Upgrade Here'. Below the table, a message states 'Your Text is Most Likely Human written, may include parts generated by AI/GPT' with a semi-circular progress indicator showing '2.07% AI GPT*'.

5. ZeroGPT for F500

The screenshot shows the ZeroGPT website interface for the F500 document. The navigation bar and main heading are identical to the F400 screenshot. The 'TABLE OF CONTENT' lists sections like 'STATEMENT OF ORIGINALITY', 'APPROVAL LETTER', 'B. RESTATE THE SPECIFICATIONS STATED IN THE F-200 DOCUMENT', '1. Main Functionality', '2. User Characteristics', '3. Constraints', 'A. Product Development Environment', 'B. Product Operational Environment', 'C. FUNCTIONAL TESTING', and '1. Testing results of every function in the specification (based on PART C in F100, PART C NO.4 in F200, PART D in F200)'. A 'Detect Text' button and an 'Upload File' link are present. To the right, it shows '14,970/15,000 Characters' and 'Check 125,000 characters. Upgrade Here'. Below the table, a message states 'Your Text is Most Likely Human written' with a semi-circular progress indicator showing '0% AI GPT*'.

ABSTRACT

Blood sample management is an important aspect of healthcare systems that supports both the efficacy of therapy and the accuracy of diagnosis. One of the most common diagnostic tools used in healthcares is blood tests. However, many hospitals and laboratories still face challenges in managing blood sample information efficiently. These inefficiencies not only interfere the quality of healthcare services but also create significant challenges for medical professionals and patients alike.

Like many similar facilities, Muara Beliti Regional Public Hospital manages patient data and blood samples mostly through manual methods. Currently, laboratory staff manually enter blood test data from a diagnostic machine into Microsoft Word. This method is not only time-consuming but also is sensitive to human error, such as incorrect data entry, which may reduce the accuracy of the results. Additionally, lab staff manually highlight abnormal results using color codes to indicate whether the values are high or low. Although this approach acts as a visual help, it also raises the possibility of workflow delays and inconsistencies.

Patient data management at Muara Beliti Regional Public Hospital still also relies on manual systems. All patient records, including personal details, test bookings, and results, are recorded manually. This time-consuming procedure is ineffective and tends to cause data processing mistakes which may lead to lost documents or make it difficult to locate historical information. Furthermore, due to the lack of automation technologies, it is difficult to maintain accurate and up-to-date records, which is crucial for both patient care and operational efficiency.

These manual processes collectively contribute to a range of problems such as workflow delays, increased risk of errors, lack of data integration, and patient inconvenience. With the increasing demand for digital solutions in healthcare, there is an urgent need for Muara Beliti Regional Public Hospital to modernize its blood sample management system. A web-based application designed to streamline and automate these processes would not only address the current inefficiencies but also enhance overall healthcare delivery.
