ABSTRACT

Along with the development of technology, web-based applications also contribute to growth in it. Many companies still use the manual method/using paper to record their cleaning inspection and assessment processes. PT. Omron Manufacturing of Indonesia is one of the parties that wants to make the best effort in utilizing technology. Therefore, it is believed that the company will start using the application of the bus and vehicle data input system as a form of company in keeping abreast of technological developments. Good data input methods can have a good impact on companies in maintaining a clean and safe environment.

This final project will discuss the creation of a web-based application to carry out the process of inputting and checking bus passenger data and PT. Omron Manufacturing of Indonesia effectively. The author will provide a good input system so that employees can easily input bus and vehicle data. In the end, the security of the company's bus and vehicle data can be well controlled by the Team with a web-based system that is used by the admin function to add users, input data and manage data history.
