SCIENTIFIC PUBLICATION APPROVAL FOR ACADEMIC INTEREST

As an academic community member of the President's University, I, the undersigned:

Name : Naufal Shidqan Sayyidan

Student ID number : 012202000032

Study program : Information System

for the purpose of development of science and technology, certify, and approve to give President University a non-exclusive royalty-free right upon my final report with the title:

WEB-BASED APPLICATION MANAGEMENT SYSTEM FOR “ALLEN LAUNDRY”

With this non-exclusive royalty-free right, President University is entitled to converse, to convert, to manage in a database, to maintain, and to publish my final report. There are to be done with the obligation from President University to mention my name as the copyright owner of my final report.

This statement I made in truth.

Cikarang, September 2023

ADVISOR APPROVAL FOR JOURNAL/INSTITUTION'S REPOSITORY

As an academic community member of the President's University, I, the undersigned:

Name : Rosalina
ID number : 20060100053
Study program : Information System
Faculty : Computing

declare that following thesis:

Title of thesis : Web-Based Application Management System for “ALLEN Laundry”
Thesis author : Naufal Shidqan Sayyidan
Student ID number : 012202000032

will be published in president university repository.

Cikarang, September 2023

A laundry management system is an application that allows us to manage data, transactions and resources for goods or services more effectively.

The main aim of this application is to make the transaction process easier and provide information from the process, manage data, provide data reports and analyze using dashboards.

This software enters data into a cloud database that will not be lost for a long time.

CodeIgniter will be used as a container to build the system.

3.2Functional Analysis

This application has several functions that shown by Table 3.1:

Table 3.

1 Table of Functionalities of ALLEN Laundry

17/89 sentences are likely AI generated. 

Writing Analysis

These measurements have been normalized on a scale of 1–100 for display on this chart.

Readability: 36.5

Sentences with short words and low amount of syllables have high readability scores.

Percent SAT: 4.2 %

Measures what percentage of words are SAT words, terms from a standardized college admissions exam known for its labyrinthine vocabulary lists.

Simplicity: 29.8 %

Measures what percentage of words are in the 100 most common words in the English language.

Perplexity: 169.5

How familiar a piece of text is to large language models like ChatGPT.

Burstiness: 37101.5

Unique score developed by GPTZero in 2022 that correlates to variance in writing. Humans generally vary their writing patterns over time.

Average Sentence Length: 8.7 words

Unique score that correlates to variance in writing, where humans generally vary writing patterns.

ABSTRACT

Data regularity and accuracy is a priority for business, management and speed in transactions are very important. The impact of the era of globalization has resulted in the rapid development of technology which previously used paper and physical documents, switching to the cloud. All macro and micro business sectors are required to implement the latest technology for their system managers. One way to implement this is to develop an information system focused on this sector.

In this final project, a Management System was developed to manage web-based data and reports which includes features for recording data on employees, customers, goods, services and reporting on each of the above items for the ALLEN laundry business. The system was developed with rapid application development, and in a short cycle in the development process. For the programming language, it uses CodeIgniter and SQL Server as the database management system. The system created can make it easier for business managers to process transactions (order/expend), employee and customer data management, price management and get reports from each recorded data based on a specified range.

Keyword: *Laundry, Transaction, Report, Data Management*
