They are Return On Assets (ROA), Debt to Equity Ratio (DER), Net Profit Margin (NPM), and Interest Rates and the dependent variable is stock price with a sample size of 80. Data analysis was performed by multiple regression analysis using statistical software . The results of this study are Return On Assets (ROA), Net Profit Margin (NPM), and interest rates affect stock prices. While the other variables, namely DER, have no effect on stock prices in coal mining companies.
