ACKNOWLEDGEMENT

By conducting this research titled "Blue Economic Pioneer: The Government's Challenge in Preserving the Marine Ecosystem in Kampung Nelayan, Kali Adem, Muara Angke, North Jakarta," we extend our profound appreciation to all contributors. We extend our gratitude to the residents of Kampung Nelayan for their generous donation of time, knowledge, and expertise. This research cannot accurately depict the issues of protecting the marine ecology in the area without their active participation.

We like to convey our gratitude to the Jakarta Provincial Environmental Agency for facilitating the necessary support and access to gather field data. Effective collaboration with governmental entities is crucial for comprehending current policies and the obstacles encountered in their execution. The data supplied by the Agency is crucial in assessing the government's involvement in preserving the sustainability of the marine ecology in Kampung Nelayan.

We extend our gratitude to the Lecturers and the University for their helpful feedback and recommendations during this study process. Facilitating supportive environments for talks and collaborations with them has enhanced our perspectives and enabled us to make improved suggestions for sustainable blue economy advancement. We also value the assistance from governmental bodies and non-governmental groups that have supplied pertinent data and information.

We extend our gratitude to our family and friends for their spiritual support and drive during this scientific endeavor. Absent their help, we would not have successfully completed this research. This study's outcomes aim to positively impact the preservation of marine ecosystems and the advancement of the blue economy in Kampung Nelayan, serving as a reference for improved future policy.

ABSTRACT

This paper explores the multifaceted impact of the Blue Economic Pioneer Project, focusing on its initiatives in Kampung Nelayan, Kali Adem, Muara Angke, which aim to enhance environmental awareness and community engagement among local fishermen communities. Key components of the project included workshops where participants learned to recycle waste materials into handcrafted items, such as tie-dye reusable tote bags, fostering creativity and sustainability. Additionally, a questionnaire was administered to the fishermen community to gather insights and exclusive information about their daily lives and challenges as full-time fishermen, enabling them to articulate their concerns and aspirations. The project culminated in a seminar attended by the Mayor of North Jakarta and representatives from the Department of Environment, where participants discussed pressing environmental issues and the government's efforts to improve water quality in North Jakarta. This engagement provided a platform for fishermen to express their feelings about government policies and share their hopes for future support. The analysis highlights the challenges faced by the Department of Environment in preserving the marine ecosystem, particularly in relation to Sustainable Development Goal 14 (SDG 14), which emphasizes the importance of conserving and sustainably using the oceans, seas, and marine resources. By examining these interactions through the lens of international relations, this study underscores the significance of collaborative efforts between local communities and government entities in promoting sustainable practices and enhancing environmental stewardship. The findings demonstrate that inclusive dialogue can lead to actionable outcomes that benefit both the community and the environment, ultimately contributing to a more sustainable future for Jakarta's coastal regions.

Key words: SDG'S 14, Marine Ecosystem, Preservation, Fisherman Community, Environmental.
