Indonesia has no difference towards most countries where the people also neglect the importance of financial planning. Indonesia is also considered as highly consumptive country where the people see the fulfillment of secondary needs as their priority. Hence, this monograf tries to find out the relationship between financial knowledge and financial attitude toward financial planning and financial satisfaction. This monograf focuses on dual-career couples working in Jakarta-Indonesia due to the consumptive behavior arisen in that segment as well. It is expected that this monograf contributes to the body of knowledge regarding financial knowledge, financial attitude, financial planning, and financial satisfaction in Indonesia context especially for dual-career couples. It is also expected to provide some insight through mix method to other couples how to plan their finance as well.
